

比特幣是什麼？

What is Bitcoin?

簡單來說，比特幣使用了一種建基於去中心化**區塊鏈**的密碼學技術，利用全球電腦作共同運算以確認交易紀錄。它可能成為新紀元中統一全球的**貨幣儲備**。

Bitcoin's working mechanism uses a new decentralization technology called **Blockchain** utilizing cryptography that requires computers all over the world working together to confirm transactions. It is the candidate of the **global currency reserved** in the next era.

中本聰在2008年發明，是世界上第一種使用**區塊鏈**的**虛擬貨幣**。

It was invented by Satoshi Nakamoto since 2008. It is the first cryptocurrency utilizing blockchain in the world.

比特幣的供應固定為兩千一百萬個，由於它稀有且難以生產，因此被稱作**數位黃金**。與其他法定貨幣相比，它不會發生**通貨膨脹**的問題。

Bitcoin's maximum supply is limited to 21,000,000 coins. Because it's rare and difficult to produce, it is regarded as digital gold. Unlike other currencies, there is no inflation.

21,000,000
